VANTA3

Brand & Design Guide

The visual identity, typography, layout system, chart language and animation principles behind the VANTA3 business presentation template.

Version 1.0 | October 2026 | 60-slide 16:9 PowerPoint template

01 · COLOUR

A violet-led palette with three vivid signals

Vanta Violet
#5B3DF5 · RGB 91 61 245
Primary. Titles accents, hero data, key series. ~60% of colour weight.

Signal Aqua
#0FB5A5 · RGB 15 181 165
Secondary. Growth, positive variance, second series.

Ember Coral
#FF5A4E · RGB 255 90 78
Accent. Emphasis, the one number to remember, risks.

Saffron
#FFB224 · RGB 255 178 36
Accent. Fourth series, highlights on dark slides.

Lavender
#A797FA · RGB 167 151 250
Supporting tint. Comparison bars, prior-period data.

Night
#14112F
Dark backgrounds: cover, chapters, close.

Ink
#1B1838
All body text and titles on light slides.

Mist
#F5F4FB
Light slide background; cards sit on it in white.

Slate
#66638A
Captions, axis labels, secondary text.

Text-safe accents
#097A70 · #D13A2F · #9E6400
Aqua, coral and saffron for text on light surfaces.

Why these colours

Violet signals intelligence and premium positioning without the sameness of corporate blue; aqua reads as growth and trust; coral provides one confident point of emphasis. The vivid hues sit on a cool, near-white mist and a deep night tone, so contrast stays high without harshness.

Contrast (WCAG 2.1)

Ink on white 17.0:1 · Violet on white 6.1:1 · Aqua-text on white 5.2:1 · Coral-text on white 4.8:1 · Saffron-text on white 4.9:1 · Saffron on Night 10.1:1. Chart labels switch automatically to Ink where white text would fall below 4.5:1.

02 · TYPOGRAPHY & LAYOUT

Editorial serif headlines, clean sans-serif data

Role	Font	Size / weight	Colour
Cover title	Cambria	50 pt bold	White
Chapter title	Cambria	44 pt bold · number 96 pt Lavender	White
Slide title	Cambria	30 pt bold, left-aligned, one line	Ink
Kicker	Calibri	11 pt bold caps, +2 pt tracking, coral dot	Violet / Aqua on dark
Hero number	Cambria	26–80 pt bold	Violet or accent
Card heading	Cambria / Calibri	15–20 pt bold	Ink
Body	Calibri	13–16 pt regular	Ink / Slate
Chart text	Calibri	Axis 11 pt · labels 9–10 pt bold	Slate / Ink
Captions, sources	Calibri	10–12 pt, italic for notes	Slate

Cambria and Calibri ship with Microsoft Office on Windows and Mac and are available in PowerPoint for the web, so the deck renders without font embedding or substitution.

Grid & spacing

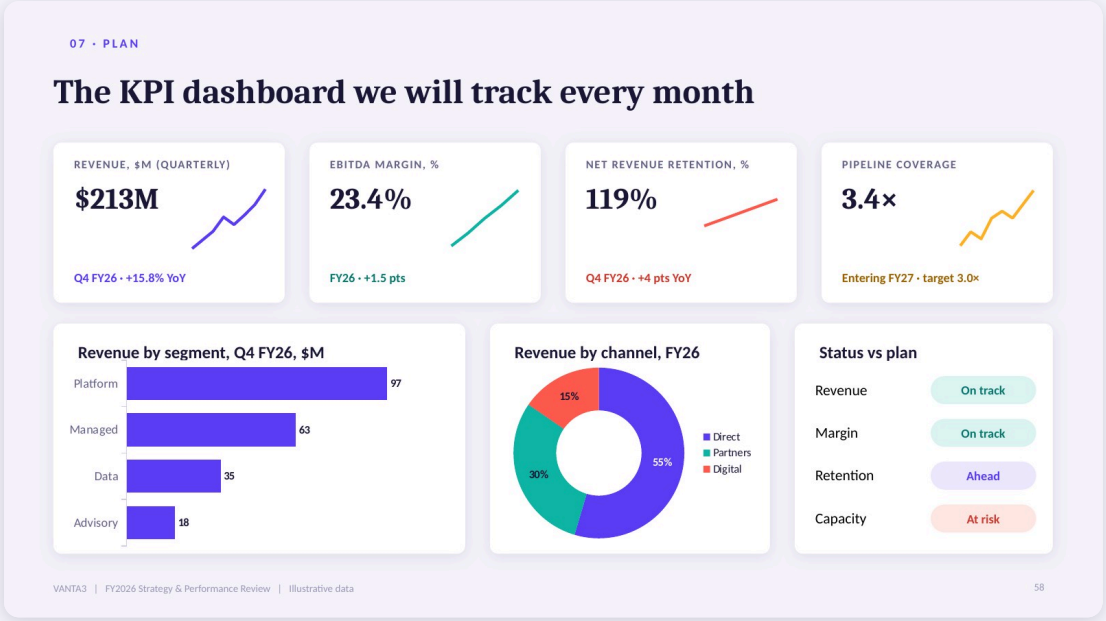

- 16:9 widescreen, 13.33 × 7.5 in. Outer margin 0.6 in on all sides.
- Content zone 12.13 in wide, from 1.72 in (below the title) to 6.78 in.
- Standard gutter 0.3 in between cards; 2, 3 and 4-column splits.
- Title block: kicker at 0.38 in, title at 0.72 in — identical on every content slide.
- Footer line and slide number on the layout, 9 pt, never edited per slide.

Shapes & components

- Cards: white, 0.1 in corner radius, soft 9% violet-tinted shadow.
- Insight panels: Lavender-tint fill, no shadow, serif heading.
- Icons: Lucide line icons inside tinted circles.
- Signature motif: orbit rings and a coral “signal dot”.
- No accent stripes, no underlines beneath titles.

03 · DATA VISUALISATION

Charts are native, editable and quiet

Series order

- Every chart is a native PowerPoint chart with its data embedded (right-click › Edit Data).
- Light horizontal gridlines (#E7E5F3), no vertical gridlines, no chart borders.
- Data labels replace axes where precise values matter.
- Highlight one category in Violet or Coral; keep context in Lavender.
- Prior period in Lavender, current period in Violet.
- Waterfall, funnel and range charts use a hidden helper series — keep it invisible.
- State units in the chart heading (“$M”, “%”) and mark forecasts with “F”.

53 charts across 13 forms: column, bar, stacked, waterfall, funnel, line, area, combo, donut, radar, scatter, bubble and tornado.

Animation principles

Element	Effect	Timing
Kicker + title	Fade, with slide entry	0.5 s, starts immediately
Cards & panels	Fade or Wipe from left / right	0.35–0.5 s, 90–150 ms stagger
Column charts	Wipe from bottom (bars grow)	0.9–1.2 s
Bar, line, area, donut charts	Wipe from left (reveals in reading order)	0.9–1.8 s
Scatter, bubble, radar	Subtle Zoom (60% → 100%) with fade	0.6 s
Tables	Wipe from top	0.6–0.9 s
KPI hero numbers	Subtle Zoom	0.45–0.6 s
Timelines & Gantt	Axis wipes first, then items step by step	0.3–0.5 s per item
Slide transition	Fade (content) · Push up (chapters)	Medium / slow

Rules

- Builds play automatically after the slide appears (“With / After previous”), so the deck runs without extra clicks. Most slides finish within 3 seconds, and none takes longer than 5.2 seconds.
- Order follows the argument: headline → evidence (chart) → interpretation (insight panel).
- Only four effects: Fade, Wipe, Zoom (subtle) and Appear. No bounce, spin, fly-in or emphasis loops.
- Each object enters once; footers, layout art and slide numbers never animate.
- Charts animate as a whole so they stay fully editable. For a series-by-series build, use Animation Pane › Effect Options › Sequence › By Series.
- To present without motion, use Slide Show › Set Up Slide Show › Show without animation.

05 · USAGE

Do and don't

Do

Write action titles that state the finding (“Asia-Pacific is our fastest-growing large region”), not topics (“Regional data”).

Don't

Repeat a title, or end a title with a full stop.

Do

Keep one dominant colour per slide and use Coral for a single point of emphasis.

Don't

Introduce new hues, gradients or stock-photo backgrounds.

Do

Build visuals from editable shapes, icons, charts and typography.

Don't

Use any image of people — photographs, portraits, silhouettes, AI-generated figures or illustrated characters.

Do

Edit numbers in the chart's data sheet so labels and bars stay in sync.

Don't

Paste charts as pictures or type values over a chart.

Do

Keep body text at 13 pt or larger and captions at 10 pt or larger.

Don't

Shrink text to fit — split the content across two slides instead.

Do

Label illustrative figures clearly; the footer reads “Illustrative data” until you replace it.

Don't

Present illustrative figures as actual results.
