Built bottom-up

- Segment, region and channel plans.

Three scenarios frame the planning range

Revenue by scenario, $M

BULL **$1,276M** **18.2% CAGR**

AI products scale fast; NRR reaches 124%; both expansion waves on time.

BASE **$1,176M** **15.1% CAGR**

Current momentum continues; NRR 120%; Wave 2 slips one quarter.

BEAR **$1,045M** **10.6% CAGR**

Macro slowdown lengthens cycles; NRR falls to 112%; Wave 2 deferred.

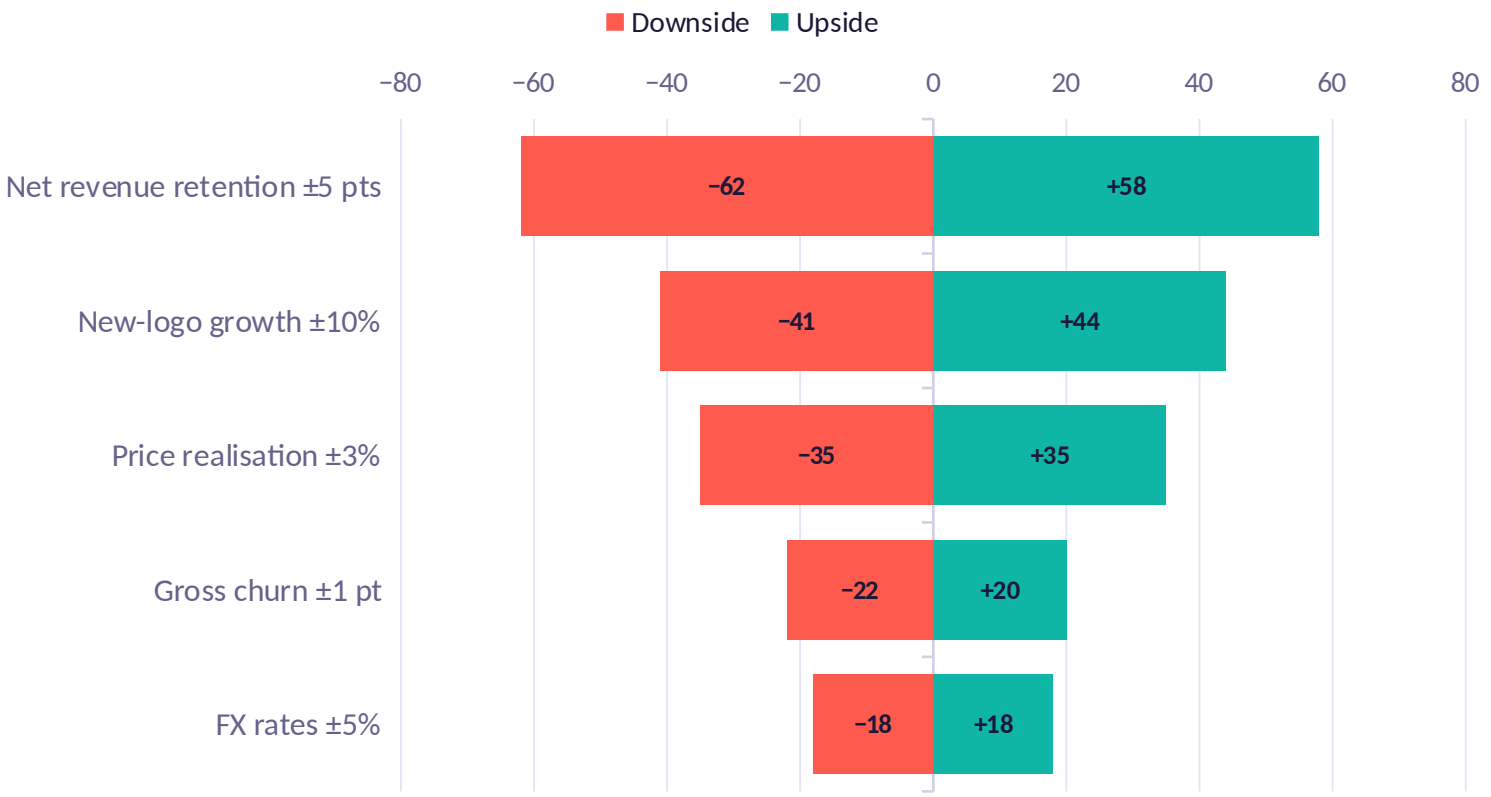

Key planning assumptions behind the base case

Driver	FY26 actual	FY27	FY28	FY29	Confidence
Market growth	9.0%	8.8%	8.5%	8.5%	High
New customers	389	430	475	520	Medium
Net revenue retention	119%	120%	120%	121%	Medium
Average price change	+2.8%	+3.0%	+3.0%	+2.5%	High
New-market revenue ($M)	—	12	44	95	Low
EBITDA margin	23.4%	24.5%	25.8%	27.0%	Medium
Headcount, year-end	2,881	3,120	3,350	3,560	High

Confidence reflects data quality and controllability of each driver. New-market revenue carries the widest range and is excluded from management bonus targets until Wave 1 is live.

Retention is the biggest swing factor for FY2029

Impact on FY29 base-case revenue of $1,176M, $M

So what

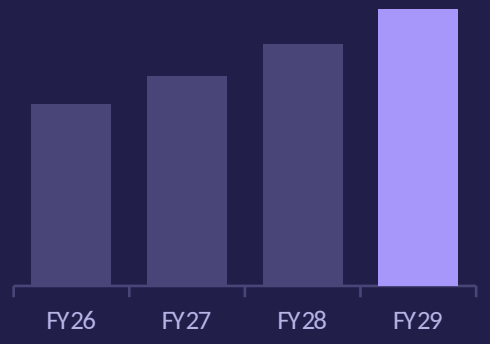

- One point of NRR is worth about $12M of FY29 revenue.
- Customer success capacity is therefore a revenue lever, not a cost line.
- FX exposure is modest and partly hedged.
